- Composted green matter waste
- Washed sand
- Topsoil

Sold by Unit: Cubic metre

### **Guidelines for Use**

When using this product we recommend that:

- The existing site soils be dug over and prepared thoroughly before incorporating this mix
- This garden mix be combined with the site soils
- The garden mix and plants be watered in an appropriate manner and sufficiently for the particular plant's needs, and that the soil is never left to dry out
- That a mulch be applied to a depth of between 75 to 100mm
- While this mix contains adequate micro-nutrients and base N:P:K levels, we recommend applying a complete slow-release fertilizer, such as Osmocote or Organic Life, at the time of planting
- This product not be used at a depth more than 300mm. Should you wish to create a garden of this depth using an imported product such as this product, please consult one of our staff before ordering.
- This product not be used as a potting mix
- Be aware that a continual maintenance regime is required, eg. Aerating the soil on a regular basis, the addition of further composts and soil conditioners and fertilisers on a regular basis depending on the plants needs, and the continual upkeep of a sufficient amount of mulch and water.

If under any circumstances the above recommendations cannot be fulfilled please advise our staff when ordering.

Failure to perform the above will be of detriment to soil condition and may result in the failure of plant growth.
